PROFIL

Software Engineer specialized in SAP development and enterprise solutions, with experience in ABAP programming, system integrations, and business process automation.

SKILLS

WORK EXPERIENCE

SAP ABAP Developer | Software Engineer

Judy Group

📅 Jan 2025 – Present

- Provide **SAP user support and troubleshooting**, assisting end users with system usage, resolving technical incidents, and performing basic system administration tasks.
- Design, develop, and maintain **SAP ABAP solutions**, including custom programs, ALV reports, and Z-transactions to meet business requirements and improve operational efficiency.
- Build and optimize **data integration and processing solutions**, including FTP-based file exchanges, Excel/CSV generation, data validation, and automated upload processes.
- Develop **automation tools and background jobs** for scheduled processing, automated reporting, and email notifications, reducing manual workload.
- Implement **mass data processing solutions using BAPIs** to perform bulk updates, data corrections, and ensure consistency across SAP master data.
- Design and maintain **Adobe Forms and SmartForms** for operational and internal document generation.
- Develop and manage **XML-based integrations** with external systems, including the **TEJ solution**.
- Create and enhance **forecasting programs and analytical tools** to support business planning and decision-making.
- Develop and optimize **SAP Queries**, and provide technical support for **SAP Fiori applications**.
- Contribute to the **Assabil Sales Force Automation project**, including data preparation, integration testing, go-live support, and post-deployment stabilization, while assisting end users.
- Customize and implement business workflows using the **Flowable BPM platform (v6.8.2)** for processes such as exit vouchers and customer/vendor data requests.
- Prepare comprehensive **technical documentation** and support application deployment across development and production environments.
